EDUCATION

Banasthali Vidyapith

2022 – 2026

B.Tech - Electronics and Communication Engineering - CGPA - 7.68

Jaipur

TECHNICAL SKILLS

Languages: C, C++, Python, SQL

Networking: CCNA, TCP/IP, VLAN, Subnetting, Routing (RIP, OSPF), DHCP, DNS, ACL, Cisco Packet Tracer

Industrial Automation: PLC Programming (Ladder Logic), SCADA, Industrial Sensors, Wiring & Troubleshooting

Embedded & Electronics: Arduino, IoT, VLSI (Semiconductor Design), Digital Electronics

Operating Systems: Windows Server, Linux (Ubuntu/CentOS), Shell Scripting

EXPERIENCE

Cybersecurity intern at Prontastic IT Services Pvt. Ltd. 🔗

Feb 2024 - January 2025

Role - Cybersecurity Intern

Jaipur

- Configured and monitored routers switches using Cisco Packet Tracer (VLAN, IP addressing, subnetting). Implemented basic routing protocols (RIP, OSPF) and performed network troubleshooting using ping traceroute. Applied network security concepts including ACL configuration and basic firewall management DHCP, DNS

Bajaj Engineering Skills Training 🔗

jan 2026 - May-2026

Role - Automation Engineer

Jaipur

- Contributed to industrial automation projects by developing PLC programs using Ladder Logic and supporting system integration activities. Performed sensor integration, electrical wiring, and troubleshooting while monitoring process performance through a SCADA interface. Additionally, gained hands-on exposure to semiconductor fabrication processes, strengthening knowledge of industrial automation, manufacturing workflows, and process control.
- Worked on PLC programming using Ladder Logic to develop and troubleshoot industrial automation applications. Integrated industrial sensors, performed electrical wiring, and assisted in system troubleshooting to ensure smooth operations. Monitored automation processes through a basic SCADA interface for real-time supervision and gained practical exposure to semiconductor fabrication processes and industrial manufacturing environments.

PROJECTS

Spy Robot with 5G AI Integration) 🔗 |

- Designed and developed an autonomous spy robot using Arduino, 5G communication, and AI-based decision-making for real-time surveillance. Integrated ultrasonic, flame, and proximity sensors to support obstacle detection and threat monitoring. Built a modular architecture suitable for border security, industrial inspection, and search-and-rescue applications.

Smart Underground Water Pipeline Monitoring System 🔗 |

- Developed a Digital Twin-based Smart Water Pipeline Monitoring System using Python to simulate and monitor the real-time condition of underground water pipelines. Integrated AI/ML algorithms to detect water leakage and contamination at an early stage, enabling predictive maintenance and minimizing operational downtime. Designed a real-time monitoring dashboard for continuous visualization of pipeline health and implemented fault localization techniques to accurately identify affected pipeline sections, improving maintenance efficiency and reducing response time.

Smart Traffic Management System using AI IoT 🔗 |

- Designed and developed an AI-powered Smart Traffic Management System to optimize traffic flow and reduce congestion at road intersections. Integrated computer vision techniques using OpenCV and YOLO for real-time vehicle detection, counting, and classification through live camera feeds. Implemented an adaptive traffic signal control algorithm that dynamically adjusted signal timings based on traffic density, improving traffic efficiency and reducing waiting time. Developed a monitoring dashboard to visualize traffic statistics and support data-driven decision-making for intelligent transportation systems.
